

Doc 3 : Needs in Kenya

We had ideas like distributing bags, plates and cardboard pots to the population in order to try to limit plastic waste. Then we took the initiative to also distribute gloves, hydroalcoholic gel and masks in order to protect the inhabitants as well as the waste pickers living in this territory (to avoid the contraction of diseases and infections). We also bought clothes and food to distribute to the most disadvantaged people and also asked people in the city to donate things they no longer used and which were usable to give them back to residents who had needs. Not to mention the fact that we have researched people looking for jobs, to help them back up and have also researched to find volunteers who could help us with the things that need to be done.

Join us

We would like to have more workers, volunteers to help us with all those people who need our help and support. We will be extremely grateful to you and so will they... If we don't do it, who will? The people who take advantage of our land and our wealth by making us believe that they are helping us when they are taking advantage of us? You are our only hope and together we can build a better future.
