

Transforming waste into beautiful objects

**EVERYTHING THAT IS DISCARDED IS
NOT NECESSARILY USELESS**

*Doc 1 : The manufacture of these
objects based on recycled materials*

Doc 2 : Kenya on the move

***To raise its level of waste recycling
to 95% by 2050, Kenya has the idea,
according to the source
www.tresor.economie.goo.fr, of
reciclando waste that is in landfills
to make objects (toys, materials,
etc.)***

***The situation in Kenya is more than
critical. There are more than a
dozen illegal dumps whose waste is
plastics and can be toxic which
endangers the more than 20 million
waste pickers in Kenya, not to
mention the heat, which multiplies
the risk of fire and poisoning.
Without forgetting the pollution
which takes up more and more
space and which prevents the
animals from feeding for lack of
greenery. Who moreover the
majority of the collectors are
women and this job does not even
allow them to meet their needs even
the most minimal.***
